

Project Design Phase

Problem – Solution Fit Template

Date	2 August 2026	Team ID	Not Specified
Project Name	Digitize Metro Ticket Booking Using ServiceNow	Maximum Marks	2 Marks

The Problem-Solution Fit identifies a real customer problem and validates that the proposed solution directly addresses that problem. For the Metro Ticket project, the focus is on reducing the time and effort required to obtain metro tickets by providing a streamlined digital booking and QR-code ticket generation process.

Problem – Solution Fit

Area	Project-specific fit
Customer	Metro passengers including daily commuters, students, employees, tourists, and occasional travelers.
Problem	Passengers may experience queues, multiple manual steps, and delays when purchasing metro tickets, especially during busy travel periods.
Existing behaviour	Passengers generally select a route and purchase a ticket through available physical or digital channels before entering the metro system.
Pain points	Waiting time, manual ticket purchase steps, uncertainty about fare calculation, dependence on ticket counters or vending machines, and the inconvenience of handling physical tickets.
Root cause	Ticket booking, fare calculation, and ticket generation are not always provided through one simple, automated, end-to-end digital workflow.
Desired outcome	Allow passengers to select stations and travel details, automatically calculate the fare, and receive a digital QR-code ticket immediately.
Problem-solution fit	A ServiceNow-based digital ticketing workflow directly addresses the identified problem by automating ticket booking and generation while providing notifications and a convenient QR-code ticket for travel.

Validation Measures

Measure	Expected result
Booking time	Reduced time required to complete a metro ticket booking.
Ticket generation	Digital ticket generated automatically after successful booking.
Fare calculation	Fare calculated consistently based on selected journey details.
Queue dependency	Reduced dependence on physical ticket counters for digital-ticket users.
Ticket accessibility	QR-code ticket available digitally for convenient access and scanning.
User experience	Simpler and more transparent journey from station selection to ticket receipt.
