Proposed Solution Template

Date	2 August 2026	Team ID	Not specified
Project Name	Digitize Metro Ticket Booking Using ServiceNow	Maximum Marks	2 Marks

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Traditional metro ticket purchasing can require passengers to wait in queues and complete multiple manual steps. Passengers may also need to depend on ticket counters or vending machines, while fare calculation and ticket generation may not be integrated into a single simple process. This creates delays and inconvenience, particularly during peak travel periods.
2	Idea / Solution description	Digitize metro ticket booking using ServiceNow to enable fast, accessible, and automated ticket generation through QR codes. Users select the source station, destination station, and relevant travel details through a digital booking interface. The system automatically calculates the fare, processes the booking through ServiceNow workflows, and generates a digital ticket with a QR code. Service Catalog is used for ticket booking, Flow Designer automates the booking and ticket-generation process, and Notifications communicate booking and ticket details to the user.
3	Novelty / Uniqueness	The solution brings metro ticket booking and automated ticket generation into a ServiceNow-based workflow. It combines structured travel-detail collection, automated fare calculation, workflow-driven ticket generation, QR-code delivery, and notifications into a single streamlined process. The approach demonstrates how ServiceNow platform capabilities can be adapted to improve a public transportation ticketing experience.
4	Social Impact / Customer Satisfaction	The solution can reduce waiting time and make ticket booking more convenient and accessible. Digital QR-code tickets reduce dependence on physical tickets and provide passengers with immediate access to their booking details. A simpler booking process can improve customer satisfaction and support a more efficient passenger experience.
5	Business Model (Revenue Model)	The solution can be offered as a digital transformation and workflow automation solution for metro operators or transportation organizations. Potential revenue sources include ServiceNow implementation and customization, workflow development, system integration, maintenance, support, and future enhancement services. For a public-sector deployment, the ticketing service may continue to follow the operator's existing fare and payment model.
6	Scalability of the Solution	The solution can be extended to support multiple metro lines, stations, routes, fare zones, passenger categories, and travel rules. Additional capabilities such as online payment integration, booking history, ticket cancellation, refunds, real-time service notifications, mobile access, analytics, and integration with QR-code scanning systems can be added as the platform evolves.
